

Chalcid Wasps (Hymenoptera: Chalcidoidea) from the Collection of Dr. L. Vassileva-Samnalieva at the Institute of Zoology, Bulgarian Academy of Sciences

*Anelia Stojanova*¹

Abstract: The chalcid species from the collection of Dr. L. Vassileva-Samnalieva were studied. The most specimens are reared from Cynipidae (Hymenoptera) galls on *Quercus* and *Rosa*, as well as from Cecidomyiidae (Diptera) developing in *Papaver*. As a result, 29 species from 7 families (Chalcididae, Eurytomidae, Torymidae, Ormyridae, Perilampidae, Eupelmidae and Eulophidae) were established. Six chalcids (*Pseudotorymus papaveris*, *Torymus armatus*, *Torymus auratus*, *Ormyrus wachtli*, *Perilampus ruficornis* and *Eupelmis cerris*) are published here for the first time to the fauna of Bulgaria. For 16 chalcids new hosts are given, which are not mentioned yet in the literature.
