Abstract: Faunistic data are given for 9 species of Dolichopodidae, mostly new to the fauna of Turkey and collected in Marmara and Antalya regions. The following species are recorded for first time in Turkey: *Chrysotus angulicornis* Kowarz, 1874, *Dolichopus nubilus* MEIGEN, 1824, *Poecilobothrus chrysozygos* (WIEDEMANN, 1817), *Sybistroma discipes* (GERMAR, 1821), *Sybistroma obscurella* (FALLÉN, 1823), *Sybistroma sphenoptera* (LOEW, 1859), *Medetera pallipes* (ZETTERSTEDT, 1843) and *Thrypticus viridis* PARENT, 1932. The presence of *Micromorphus albipes* (ZETTERSTEDT, 1843) in the country is confirmed. As a result, 87 Dolichopodidae species are known for Turkey at the present.

Key words: Diptera, Dolichopodidae, Turkey, Marmara and Antalya Regions, new records
